Your Reliable  
Surveillance for Security

**2013 Surveillance Solution**

# An Optimized NVR System to Ensure All-round Security

Surveillance Station delivers a sophisticated security solution through user-friendly management tools. Whether for small or large scale implementations, your assets are always safeguarded with flexible and intelligent monitoring tools. Surveillance Station is the ideal solution to meet your deployment requirements and surveillance needs.

## ● Live View

Whether on Mac or PC, you can always monitor live happenings via the Internet. Watch live view feeds on all major browsers – Firefox®, Google Chrome™, Internet Explorer®, & Safari®.

### Concurrent Live View

#### Stream 49 Channels

View up to 49 channels. Stream live feeds from cameras hosted on different NVRs and monitor on a single interface.

#### Flexible Layout

Optimize Live View layouts to fit different camera resolutions for the best monitoring experience.

#### Versatile Support

Install fisheye cameras for 360° monitoring; PTZ & snapshot are supported; E-map allows an overview of IP cam deployment.

### Live View Analytics

#### Tally Counter

Surveillance Station will keep count each time an object crosses a predefined boundary.

#### No-Idle Zone

Any object that stays in the no-idle zone over a set duration will trigger an instant alert.

#### Virtual Fence

Receive alerts whenever an object goes beyond the virtual predefined border.

#### More Useful Analytics

Whether it's a detected movement, an object emerging or being removed, a lost focus or the lens block of an IP camera, you will receive immediate alerts. Nothing goes unnoticed.

### Patrol Route

IP cams move following the preset positions of their patrol route. Patrols and recordings can be triggered on suspicious events or movements.

# ● Recording Management

Use Surveillance Station's simple & intuitive user interface to manage and browse through all your recordings. An extensive set of tools are available to call up any recording with just a few clicks.

## View Recordings

### Recording Playback

Use the Sync mode to view all recordings with a single timeline and Non-Sync mode to eliminate any gaps between recordings, while Time Slice mode lets you split one recording into 4 equal segments to make playback more efficient.

### Image Enhancement

Adjust image attributes such as brightness, saturation, contrast and sharpness to make footage clearer. And it works under Smart Search, too.

## Archive & Authentication

Recordings can be exported to archive for later review. The Evidence Integrity Authenticator can ensure the originality of videos to be legally admissible in court.

## Smart Search

Smart Search offers 8 modes to automatically track down targets during recording playback – with customizable features such as detection zones, object sizes and many others.

## Schedule Your Recording

### Schedule & Archive

Create and customize a 24/7 recording schedule with different types of recording modes. The Archive Rotation system prevents past recordings from filling up storage space.

### Versatile Recording Modes

Set up recording schedules that perfectly fit your monitoring needs. You can choose modes such as Manual, Continuous, Motion Detection, Alarm, and Alarm with Motion Detection.

# ● Camera Management

Whether for a single camera or for large-scale deployment, Surveillance Station offers versatile tools to manage IP camera settings efficiently.

## Versatile Support

Choose between 1,400 cameras from well-known brands. In-depth integration with select vendors, grants more options to customize your camera settings.

## Notification

Receive alert notifications to respond to particular events in time. Notifications can be sent via SMS, email, Skype, or push notifications on mobile devices.

## Camera Customization

### Camera Optimization

IT managers can edit advanced settings for individual cameras directly on Surveillance Station, including video orientation, exposure mode, OSD overlap and more\*.

### Web API Integration

3<sup>rd</sup>-party developers and system integrators can easily integrate the Surveillance Station Web API with existing security systems for a more complete experience and higher security standards.

# ● Mobile

## Mobile Surveillance

With DS cam, watch live view and recording footage, take snapshots, and control the camera with PTZ actions right from your mobile device.

## Push Notifications

DS cam lets you receive instant notifications right on your mobile device. There are a total of 9 types of events which can trigger alerts to guarantee you won't ever miss anything.

\*Camera optimization is only available when the features are supported by cameras of selected brands. For more information please visit [www.synology.com](http://www.synology.com).

# The Effective Surveillance Solution for Large-Scale Deployment

Synology's Surveillance Station Centralized Management System (CMS) is a powerful tool designed for large-scale and high level enterprise projects. With CMS, you can now deploy multiple network video recording (NVR) systems across different geographical locations. Customizing various configurations, watching live feeds and video playback are now an intuitive task even in a massive IP camera deployment.

## Centralized Management System

Surveillance Station CMS offers a simple yet feature-rich interface to easily navigate between live-view, recordings and system management for your CMS deployment.

### Live-View & Recording

With CMS, you can watch live feeds and playback recordings of all your IP cameras on a web browser and mobile device anytime, anywhere.

### E-Map Support

E-Map lets you quickly pull up a camera's image by pinpointing the locations of your recording servers and the corresponding IP cameras in a large-scale deployment.

### User Profile

As a system administrator, you can easily create user accounts and assign permission privilege to help facilitate efficient management across your surveillance deployment.

### Notification & System Log

CMS allows you to aggregate system notifications and logs of various recording servers for you to monitor the overall deployment status from the commanding host server.
